FRAZIER-SIMPLEX, INC.

Frazier-Simplex, Inc. was founded on July 29, 1918, as Simplex Engineering Company of Washington, Pennsylvania, and has remained under Frazier family ownership for three generations. In its remarkable history with the glass industry, continuity, innovation and service have been benchmarks of past accomplishments.

Glass manufacturing, itself, has involved a constant pursuit of quality products for hundreds of years. As glass production methods improved, attention turned to prolonging the campaign of glass melting furnaces. For nearly one hundred years, Frazier-Simplex has strived to deliver both of these essential components to glass manufacturers around the world. Innovative furnace designs and consulting expertise are just examples of why Frazier-Simplex has been a respected member of the world-wide glass community for so many years. We are experienced in all types of glass and glass production, from soda lime container glass to borosilicate pharmaceutical glass.

Frazier-Simplex, Inc. designs and manufactures several innovative pieces of equipment that are in widespread use, including screw batch and blanket chargers for introducing raw materials into glass melting furnaces, and suspended refractory systems. Most equipment is manufactured in-house at the Frazier-Simplex Machine Company, also located in Washington, Pennsylvania. This 32,000 square foot facility was acquired in 1987.

In addition to technology, one of the most important features offered by Frazier-Simplex is excellent customer service regardless of the size of the project. Consider Frazier-Simplex for your next furnace rebuild or new construction. Services available include, but are not limited to:

- ❖ Demolition, construction and commissioning services
- ❖ Hot and cold repairs to refractory substructure and superstructure
- ❖ Hot and cold equipment installation to existing furnaces
- ❖ Electronically controlled and heated drains and safety related equipment
- ❖ Furnace surveys and audits
- ❖ Visual and thermographic inspections
- ❖ Research and development projects

Today Frazier-Simplex, Inc. continues to extend their activities by completing numerous domestic and international installations and developing many specialized products for the glass industry throughout the world.
